

Medical Surveillance Respiratory Protection

Employees may be required to wear a respirator for protection against airborne exposures to various materials. In such cases, employees must be medically evaluated pursuant to Title 8 CCR, Section 5144 (e).

The medical evaluation is required before an employee is fit tested or required to use a respirator pursuant to the following:

- The medical evaluation must be performed by a physician or other licensed health care professional (PLHCP).
- The medical evaluation may be performed using a medical questionnaire (attached) or by a medical examination that obtains the same information as the questionnaire.
- Follow-up medical examinations are required when a positive response is given to any question among questions 1 through 8 in Section 2 of the questionnaire.
- The follow-up medical examination shall include any medical tests, consultations, or diagnostic procedures that the PLHCP deems necessary to make a final determination.

The PLHCP must provide a written recommendation regarding the employee's ability to use a respirator. The written recommendation must include the following information:

- Any limitations on respirator use related to the medical condition of the employee, or relating to the workplace conditions in which the respirator will be used, including whether or not the employee is medically able to use the respirator.
- The need, if any, for follow-up medical evaluations.
- A statement that the PLHCP has provided the employee with a copy of the PLHCP's written recommendation.

Additional medical evaluations shall be provided when:

- An employee reports medical signs or symptoms that are related to ability to use a respirator.
- A PLHCP, supervisor, or the respirator program administrator informs the employer that an employee needs to be reevaluated.
- Information from the respiratory protection program, including observations made during fit testing and program evaluation, indicates a need for employee reevaluation.
- A change occurs in workplace conditions (e.g., physical work effort, protective clothing, temperature) that may result in a substantial increase in the physiological burden placed on an employee.
- Re-evaluations are recommended every three years.
